

Project Finance sample Business Case: financial plan life-cycle from inception to operations

The financial plan for a Project Finance iterates through many revisions while proponent, development bank, sponsor and commercial bank proceed with the data entry, analysis, validation and refinement phases. The **simevo Financial Simulation technology** can be used to create a private cloud-based SaaS solution, accessible via a web-based tool from desktops, laptops and mobile devices. The model equations can be shared openly and reviewed by all parties, while the data is stored in a centralized location.

Costs: The development effort for the solution is in the range of 3 to 6 man-months and is comparable to the development costs of a Microsoft Excel model. The software license for the on-premise server is perpetual and can be amortized over several projects.

Soft savings: Lower risk of programming and data entry errors. Model revision control, information sharing and the possibility of restricted distribution enable a truly collaborative work-flow.

Hard savings: Reduced financial model development costs in case of repeated, similar projects. Fewer man-days required to the specialists technology licensor to produce the customized material and energy balance.
